
SweTree Technologies

Innovators in Forest Biotechnology

Environmental Policy

A core value for SweTree Technologies is to use our profound knowledge of plant biotechnology and fiber chemistry to improve the output of renewable raw material. We are constantly seeking to apply science in a way that broadens the usefulness and improves the value of both raw material and final product.

We do this with a social consciousness and a clear focus to protect the environment and natural forest resources that are part of our global ecosystem. New technologies, which are key to our efforts, are implemented based on knowledge with responsibility and in accordance with prevailing rules and regulations.
